

November 2019

We are working with our tenants to achieve a cleaner, greener and healthier space to live, work and play. Through our sustainability tenant engagement program, ForeverGreen, we further our commitment by providing you, our tenants, with monthly tips to support your sustainability efforts.

A: LESS THAN 20% OF THIS IS RECYCLED GLOBALLY.

Q: WHAT IS E-WASTE?

watch the video

Don't Trash It

- E-Waste is the fastest growing waste stream in the world, yet only 20% of global e-waste is recycled. The remaining 80% is either dumped in a landfill or incinerated. To ensure proper disposal of your e-waste, choose a certified recycling vendor using [e-Steward](#) or [R2](#).
- Did you know batteries are also considered e-waste? Batteries contain harmful heavy metals that are toxic to humans and the environment. Fortunately, many retailers offer take back programs where you can return used single use batteries, rechargeable batteries, and even cellphones. Use this [interactive map](#) to find a participating retailer near you.
- Extend the life of your device by buying a case, keeping it clean, and not overcharging the battery.
