

WATER CONSERVATION

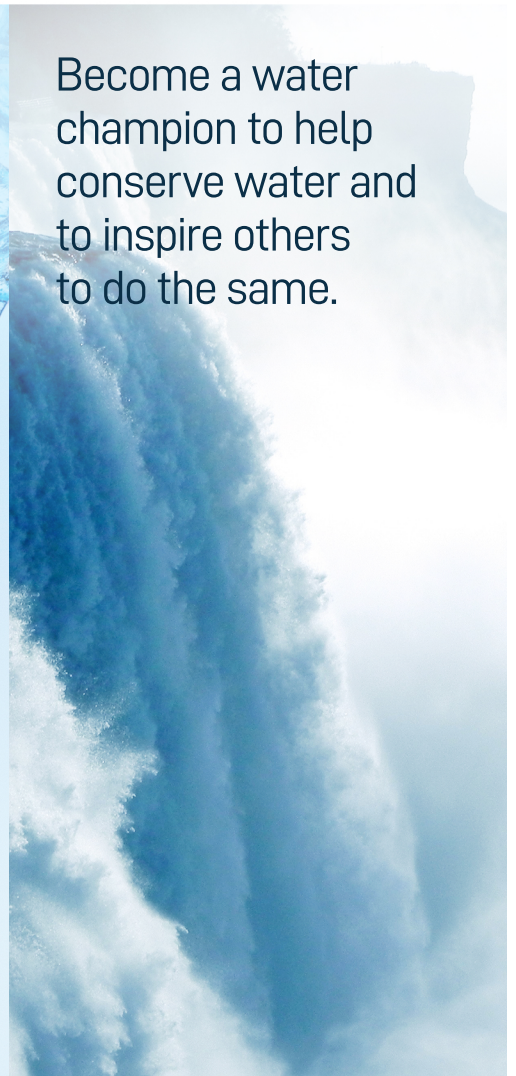

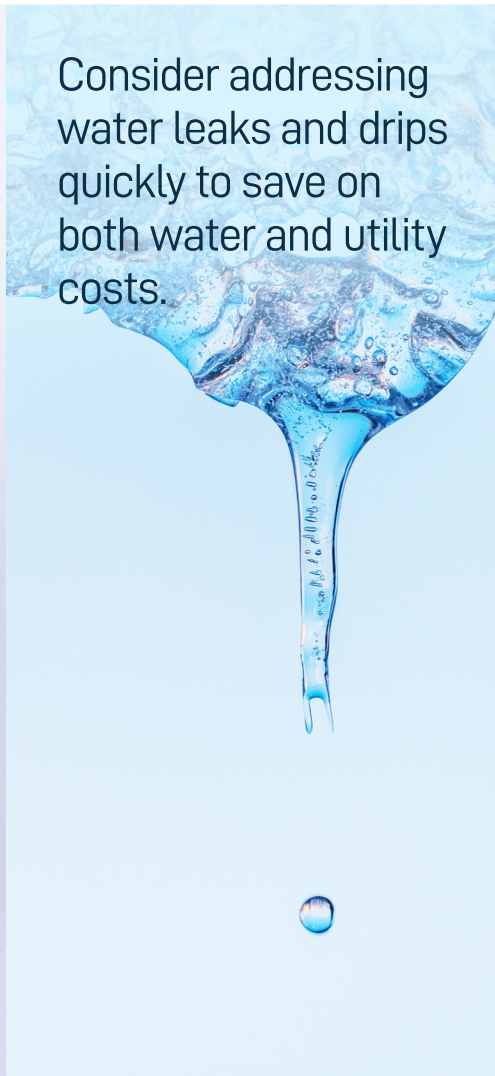

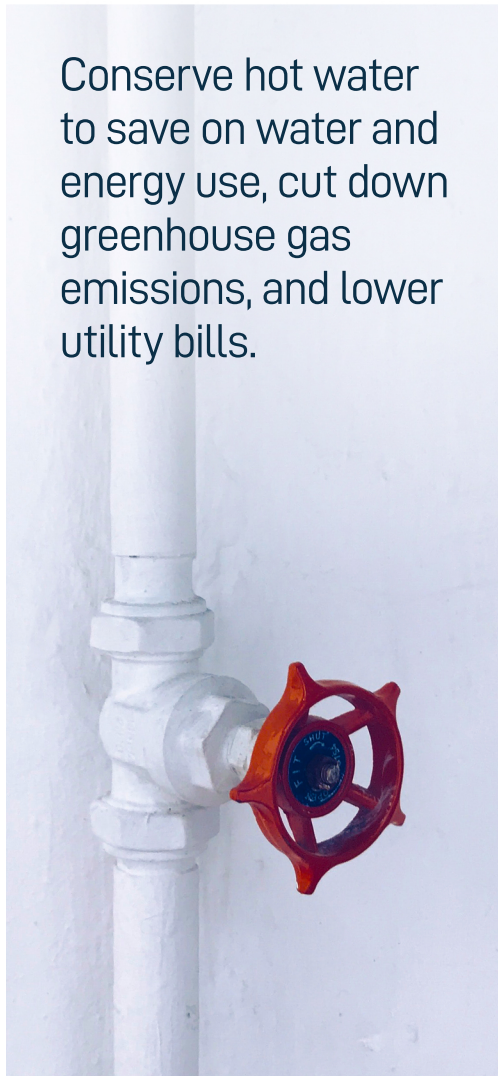

Over the past four decades, the world's population has doubled, while global water use has quadrupled. Taking action now to conserve water is essential to preserving this natural and finite resource.

HERE IS HOW YOU CAN HELP REDUCE YOUR IMPACT:

Conserve hot water to save on water and energy use, cut down greenhouse gas emissions, and lower utility bills.

Consider addressing water leaks and drips quickly to save on both water and utility costs.

Become a water champion to help conserve water and to inspire others to do the same.
